

01 DAM Price Profile

48 half-hourly clearing prices · the core of every daily briefing

WHAT TO FIND IMMEDIATELY

Peak price	Time + €/MWh. Was it at the morning ramp (07–09), evening peak (17–20), or an unusual hour?
Min price	When and how low? Below €0 = oversupply event worth flagging.
Spread	Peak minus min. This single number summarises daily volatility — track it across days.
Price shape	Dual-peak (typical weekday)? Single spike? Flat? The shape tells the demand story without needing demand data.

ANGLES — ROTATE ONE PER POST

Morning ramp	How steep is 06:00–09:00? Measure €/MWh per half-hour. Steeper ramp = tighter thermal margin. Classic price-setting period.
Spike event	If peak > €250, name the driver: low wind, high demand, outage, interconnector export. Don't just describe — explain.
Negative prices	Any periods below €0? High wind + low demand + must-run thermal = oversupply. What does that imply for curtailment costs?
Week-on-week	Compare today's chart shape to the same day last week. Is volatility increasing or decreasing? What changed?
Seasonal signal	How does today's mean compare to same period last year? Tracking ahead or behind on the seasonal curve?
Price floor	What's holding up off-peak prices? Gas price level, must-run plant, or interconnector imports all set the floor differently.

HOOK SENTENCE FORMULA

Spike	"Prices hit €[peak] at [time] — the [highest/lowest] [morning/evening] level in [X] weeks — before falling to €[min] by [time]."
Suppression	"Today's mean of €[X]/MWh is the [lowest/highest] of the month. The [flat/volatile] curve tells you exactly why."
Spread	"The intraday spread reached €[X] today — [wider/narrower] than Tuesday's €[Y], and a clear signal for [why]."

WHY THIS MATTERS FOR SALARY

Price formation analysis is the foundation of every high-value energy role — trading, analysis, flexibility, consulting, regulatory. Being able to explain WHY prices moved (not just WHAT they did) is the skill that separates a €40k data entry role from a €70k+ analyst role. Master this chart first.

SALARY SIGNAL KEYWORDS TO USE

Price formation	Marginal cost pricing	Thermal price-setting	Scarcity pricing	Intraday spread
